Use Case Scenario

Describe aspects of the intended functionality of your user interface by describing an example user session.

1) Starting point. (Describe the state of the user interface at the start of this scenario. This need not be the initial state.)

2) Actions. (Describe the user and system behaviors throughout the interactive session. Continue on additional pages as needed. Attach and refer to diagrams if necessary.)

User action (what the user does)	Immediate Feedback (what the user sees during the action)	Visible Result (the change visible after the action)	Application State Change (how the action affects the system internally, if at all)
